### CLOVERLEAF FLOWFORM

The Cloverleaf is a triple flowform in one, with a central outlet. Perfect for parks, schools, hospitals and gardens. The Cloverleaf is a “domestic” or “landscape” model, used to create water features. They are placed in the centre of a water feature and can also be incorporated with other flowforms for larger pools and ponds.

The smaller heart-shaped cavities act as a secondary flowform, adding other activities, thereby creating a broader spectrum of water enhancement.

The positive aspects of Flowforms are brought together in the Cloverleaf - the lemniscate (the figure of 8 pattern of the water), and the rhythmical movements that bring about a calming and harmonising quality to the environment calling forth the sounds of a mountain stream or small waves lapping on a beach - a delight to sit next to.

### FLOWFORMS

Flowforms are vessels that seek to emulate the swirls and vortices of the mountain stream, enabling water to reoxygenate, revitalise and rejuvenate itself, to bring it back to its more natural state – thereby assisting both the human and the plant kingdom. They form a cascade of water that flows into a tank or pool. The water can be recirculated as many times as desired.

The secret of the Flowform lies in it creating a “figure of 8” movement in the water - the lemniscate. This movement is one of the foundation patterns of all life. Oxygen is folded into the water, and the microorganisms are aided in breaking down the “unwanted matter” in a natural and gentle way.

In addition, the psychological effect of the contraction and expansion of the rhythmical movements of the Flowforms is of a calming quality and can produce an enlivening and awakening of the senses.

This dynamic movement, which calls forth the sounds of a mountain stream or small waves on a beach, through the rhythms, sounds and pulses the water produces, gives rise to a breathing quality.

## USES OF FLOWFORMS

- ❑ Creating a rhythmical ambience, beautifying parks and gardens.
- ❑ Revitalising drinking water - Flowforms are used on town water, tank water and dams to enhance water's life giving properties.
- ❑ Removing smells and oxygenating contaminated water.
- ❑ Aquaculture - Flowforms oxygenate and revitalise water that creates a healthy environment that fish thrive in.
- ❑ Swimming pools - use Flowforms to keep the water more alive and needing less chemicals.

## DIMENSIONS

**Plan View**

**Side View**

<b>Flow Rate</b>	<b>Optimum</b>	<b>Max</b>	<b>Min</b>
<b>Litres/min</b>	80	90	70
<b>Mounting</b>	Centre Mounted over a Pond or Pool		
<b>Effective Diameter (lip to lip)</b>	870mm		
<b>Dimensions (mm)</b>	<b>Length</b>	<b>Width</b>	<b>Height</b>
	870	870	200
<b>Weight</b>	90 kg		

<b>Material</b>	Bluestone Concrete
<b>Finishes</b>	Sandstone, Terracotta, Black, Peach

### About Phil Sedgman

*Phil spent 20 years in Tasmania exploring the natural environment and farming the land. His love of nature and inquiring mind led him to Bio-Dynamics. Intrigued by Flowforms, he became acquainted with moulds, forms and plugs and developed his own Flowform design in 1996. Struck by the magic, he wishes to impart this to you as a method of enlivening water and giving it life. He is now a Board member and technical adviser of the Biodynamic AgriCulture Australia and conducts lectures and workshops on Flowforms.*
