TARUNA FLOWFORM

The Taruna is a larger, decorative, yet very functional Flowform. With its strong waves and lazy figure of eight movement, the Taruna produces deep rhythmical sound and pronounced water enhancement. 1030 mm wide and 940 mm long, No entry bowl is required and the Taruna cascades the water from bowl to catch cup via a lip, which produces a rhythmically pulsating water fall.

The main feature of this beautifully shaped Flowform is the peaceful waves created within. Ideally suited to be viewed from above, such as below balconies, verandahs and stairs. Perfect for larger swimming pools and landscaped water features.

Often used for larger rural & urban water enhancement projects such as wildlife farms, fish farms and water recycling, the Taruna runs at 250 to 300 litres/min. When assembled in sets of either 5 or 7, volumes of over a megalitre can be effectively enhanced, depending on types of water used & prevailing climatic conditions.

The Taruna has been effectively revitalising treated sewage at the Currumbin Bird Sanctuary since the early 90's.

FLOWFORMS

Flowforms are vessels that have greater effect than the swirls and vortices of the mountain stream, enabling water to re-oxygenate, revitalise and rejuvenate itself, to bring it back to its more natural state - thereby assisting both the human and the plant kingdom. They form a cascade of water that flows into a tank or pool. The water can be re-circulated as many times as desired.

The secret of the Flowform lies in it creating a "figure of 8" movement in the water - the Lemniscate. This movement is one of the foundation patterns of all life. Oxygen is folded into the water, and the microorganisms are aided in breaking down the "unwanted matter" in a natural and gentle way.

In addition, the psychological effect of the contraction and expansion of the rhythmical movements of the Flowforms is of a calming quality and can produce an enlivening and awakening of the senses.

This dynamic movement, which calls forth the sounds of a mountain stream or small waves on a beach, through the rhythms, sounds and pulses the water produces, gives rise to a breathing quality within the water thereby creating natural and effective enhancement.

About Phil Sedgman

Phil spent 20 years in Tasmania exploring the natural environment and farming the land. His love of nature and inquiring mind led him to Bio-Dynamics. Intrigued by Flowforms, he became acquainted with moulds, forms and plugs and developed his own Flowform design in 1996. Struck by the magic, he wishes to impart this to you as a method of enlivening water and giving it life. He is now a Board member and technical adviser of the Biodynamic AgriCulture Australia and conducts lectures and workshops on Flowforms.

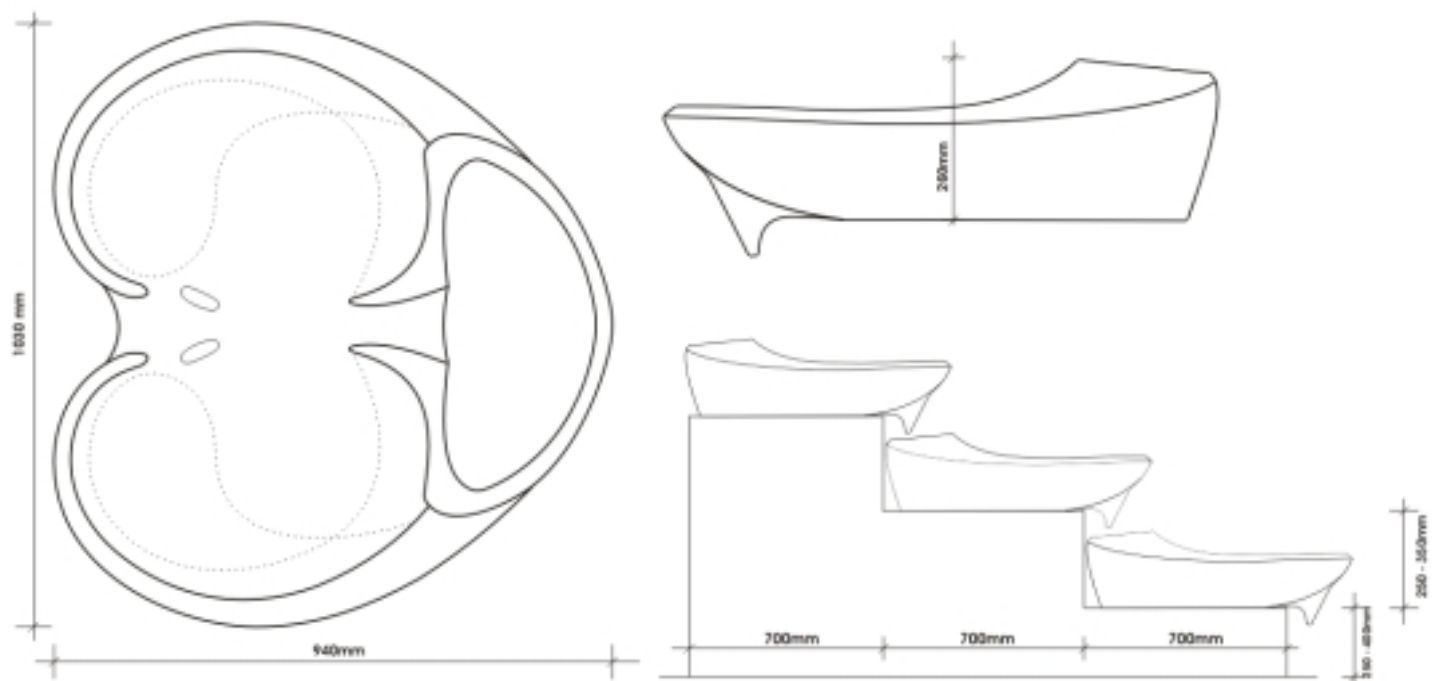

TARUNA Flowform

USES OF FLOWFORMS

- Creating a rhythmical ambience, beautifying parks and gardens.
- Revitalising drinking water - Flowforms are used on town water, tank water and dams to enhance water's life giving properties.
- Removing smells and oxygenating contaminated water.
- Aquiculture - Flowforms oxygenate and revitalise water that creates a healthy environment that fish thrive in.
- Swimming pools - use Flowforms to keep the water more alive and needing less chemicals.

DIMENSIONS

Plan View

Side View

Flow Rate	Optimum	Max.	Min.
Litres/min - Gal/hr	275	300	250
Gradient	30°		
Lip to Lip Effective Length	820		
Dimensions (mm)	Length	Width	Height
	940	1030	260
Approx. Weight	120kg		

Material	Bleustone Concrete		
Finishes	Sandstone Balck	Terracotta Peach	
Foundation Steps	Vertical	Horizontal	Width
Outlet (Bot)	250 - 400	700	400 - 500
Standard	250 - 350		400 - 500

NOTES:

Sets of 3 or 7
Featuring a pronounced Lemniscate movement.
